The United States has one of the highest poverty rates among industrialized nations.

## **What do hunger and food insecurity mean in the United States?**

USDA defines food insecurity by households that do not have adequate access to healthy food for an active, healthy lifestyle. Food insecurity with hunger means that families go without food for some days out of the month and in sever cases children go without food for one or more days a month. It is the lack of access to enough food to fully meet basic needs at all times due to lack of financial resources. Some people may find themselves skipping meals or cutting back on the quality or quantity of food they purchase at the stores. This recurring and involuntary lack of access to food can lead to malnutrition over time and other debilitating effects.
